

hackerspace global grid

world domination - one measurement at a time

hadez@hgg.aero, @hdznrrd armin@hgg.aero, @rel0c8

shackspace - devision for aerospace research and space exploration

10. Mai 2012

1 What is hgg

2 What we're actually doing

3 On the horizon

Caveat

- hgg is, at its heart, a *very* technical project
- Fear not! This presentation will give you a general overview and keep technicalities to a minimum

Caveat

- hgg is, at its heart, a *very* technical project
- Fear not! This presentation will give you a general overview and keep technicalities to a minimum

1 What is hgg

- History
- hgg in a nutshell
- Who's behind it?

2 What we're actually doing

- The core idea
- Status quo

3 On the horizon

- Roadmap
- How to help

CCCamp 2011

- Nick Farr, Lars Weiler, Jens Ohlig propose a *Hacker Space Program*
 - Ambitious goal: 23 years to put a hacker on the moon!
 - Three hackers from shackspace immediately brainfart
 - "This is awesome!"
 - "Let's do it!"
 - P.S.: hgg is a small part in the bigger scheme of the *Hacker Space Program*

The first idea

- Short term: Understand how satellite communication works
- Mid term: Setup something so we can receive sat comm
 - Make it simple: Each hackerspace should have one antenna, one computer, one radio module
 - One antenna per building
- Long term: Add something so we can also send signals

The first idea

- Short term: Understand how satellite communication works
- Mid term: Setup something so we can receive sat comm
 - Make it simple. Each *hackerspace* should have one
 - Each Hackerspace means it's *global*
 - Network the ground stations and build a *grid*
- Long term: Add something so we can also send signals

Joining up w/ Constellation

- Andreas Hornig of AerospaceResearch.net ends up giving a talk on Constellation at shackspace
- Both sides immediately notice the similarity in his DGSN and our HGG idea
- We join forces

Joining up w/ Constellation

- Andreas Hornig of AerospaceResearch.net ends up giving a talk on Constellation at shackspace
- Both sides immediately notice the similarity in his DGSN and our HGG idea
- We join forces

"Call to arms" talk at 28c3

- After the initial research and proof of concepts we thought it would be nice to have 3 to 5 more folks helping us
- So we handed in a talk for 28c3
- Press feedback was never the same...

What hgg definitely isn't

- The *Hacker Space Program's* aim is to have communication infrastructure in place at some point
- *Hackespace Global Grid / hgg* is working on the very basics of this (distributed ground station network)
- However, we (as in hgg) are *not* building an alternative internet at the moment
- We are working on getting something out there which can be used as a platform and starting point to seed other projects and ideas

Consolidating existing and new information

- There is already *a lot* of information available
 - HAM radio community
 - Amateur satellite community
 - Hackers & makers
- We're collecting information relevant to the ask
- Try to make it easier to understand where certain details aren't documented well
- Document our findings, results and failures for others to learn from

- History
- hgg in a nutshell
- Who's behind it?

2 What we're actually doing

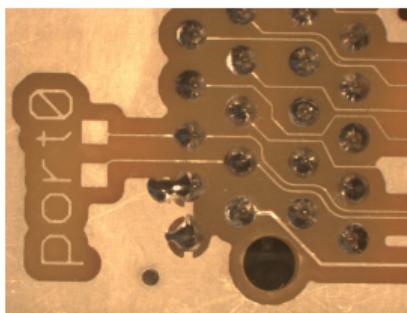

- The core idea
- Status quo

3 On the horizon

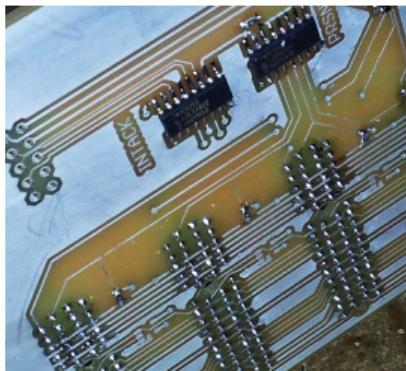

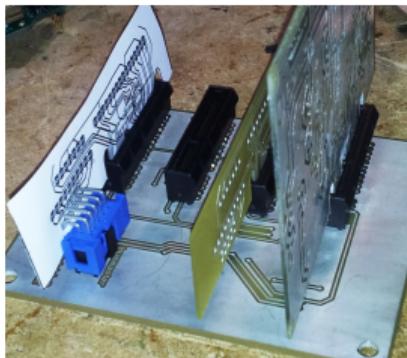

- Roadmap
- How to help

Specification of physical interface between modules

- Modules are connected via a backplane
- PCIe 4x plug w/ custom pinout
- 2x RS485 lanes for inter-module communication
- SPI-ish time broadcast bus
- Differential clock signal for high-res timing signal
- Each module sports storage for calibration data

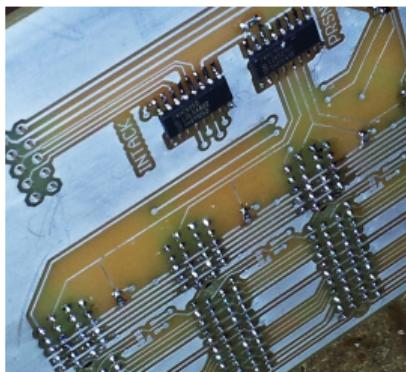

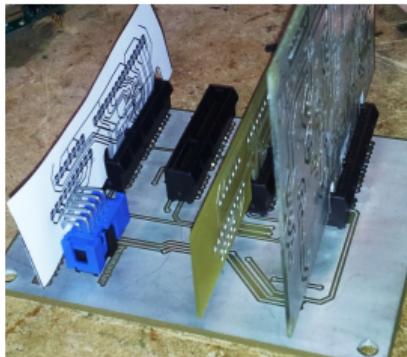

friendship0 backplane

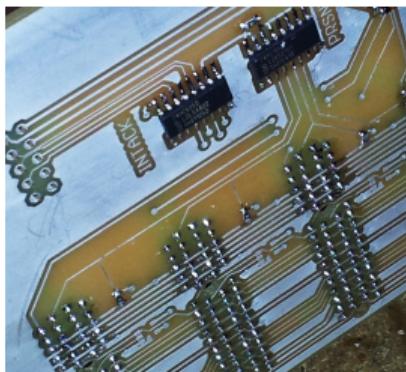

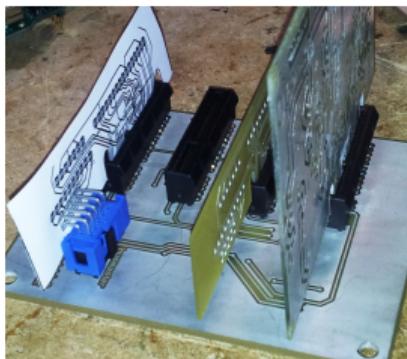

- Four modules slots, one dedicated to bus master module
- ICs for interrupt handling
- Can be easily scaled up, next step eight or nine slots

friendship0 backplane

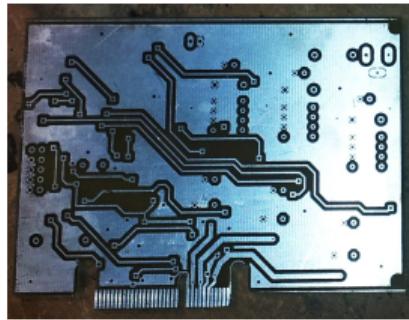

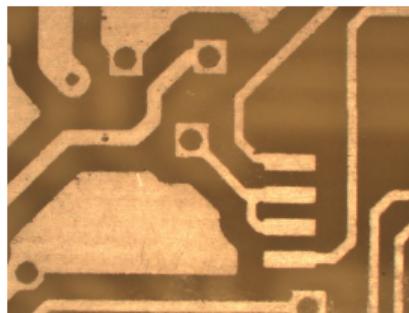

- Four modules slots, one dedicated to bus master module
- ICs for interrupt handling
- Can be easily scaled up, next step eight or nine slots

friendship0 backplane

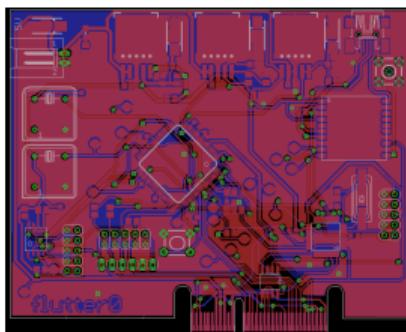

- Four modules slots, one dedicated to bus master module
- ICs for interrupt handling
- Can be easily scaled up, next step eight or nine slots

braeburn0 & 1 power supply module

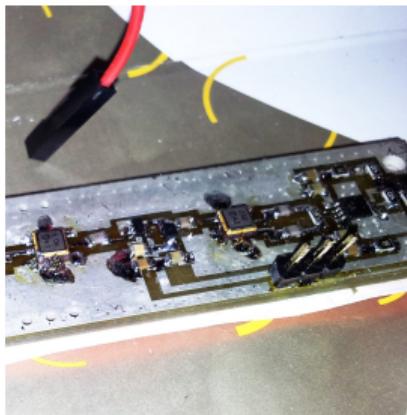

- Single external power source
- All voltages generated on-board, stabilized
- In-system voltage level monitoring
- braeburn1 using PC power supply

flutter0 high precision distributed time source module

- Spartan3 FPGA for high-res timing (<100 ns)
- ATmega 168 for lo-res timing (1 s to 1/10th s)
- Low cost GPS module w/ external antenna support

dash0 proof of concept

- ADS-B receiver based around miniADSB module
- Easily track commercial aircrafts
- Perfect for verifying pseudo ranging algorithms

celestia0 bus master module

- Manages interrupt requests by modules
- Arbitrates resources
- Enumeration of available modules

dash0 ADSB receiver module

- Built around the proof of concept
- Most likely CPLD-based decoding of Manchester-encoded signal
- Contributions by Paweł
- Perfect to test pseudo-ranging because ADSB signal contains GPS location data already (ground truth)
- Your own flight tracking radar at home? Hell, yeah!

Why we have not asked for donations, yet

Questions!

Pretty please :)
