

# hackerspace global grid

world domination - one measurement at a time

hadez@hgg.aero, @hdznrrd      timm@hgg.aero, @timmedia

shackspace - devision for aerospace research, space exploration and other  
improbable sciences

27. Oktober 2012

## 1 What is hgg

## 2 What we're actually doing

# Once upon a time

- There were 3 guys wanting to understand satellite communications
- Build networked receiver stations just for kicks

# Once upon a time

- There were 3 guys wanting to understand satellite communications
- Build networked receiver stations just for kicks

# Now

- Joined forces with the Constellation project (Andreas Hornig)
- We're building a distributed measurement network
- Aiming to track HAMSATs

# Now

- Joined forces with the Constellation project (Andreas Hornig)
- We're building a distributed measurement network
- Aiming to track HAMSATs

# Now

## 1 What is hgg

- hgg in a nutshell
- Who's behind it?

## 2 What we're actually doing

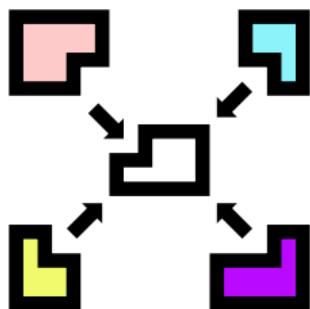

- The core idea
- Status quo
- How to help

# Build a modular system

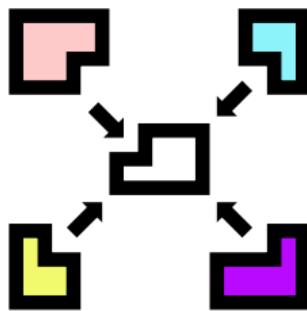

- Easier to develop
- Easier to extend
- Easier to improve

# Build a modular system

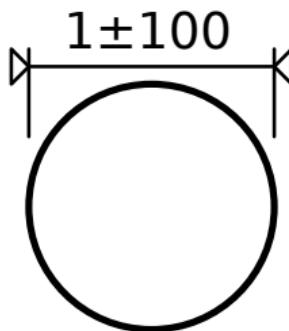

- Easier to develop
- Easier to extend
- Easier to improve

# Build a modular system

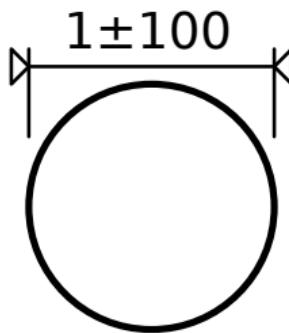

- Easier to develop
- Easier to extend
- Easier to improve

# Make it as accurate as possible

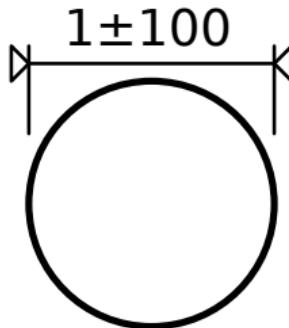

- One second resolution is "boring"
- Let's aim for 100 ns
- Allow scaling up to "ridiculous" (for a hobby project)

# Make it as accurate as possible

- One second resolution is "boring"
- Let's aim for 100 ns
- Allow scaling up to "ridiculous" (for a hobby project)

# Make it as accurate as possible

## 2 What we're actually doing

- The core idea
- Status quo
- How to help

# Consolidating existing and new information

- There is already *a lot* of information available
  - HAM radio community
  - Amateur satellite community
  - Hackers & makers
- We're collecting information relevant to the ask
- Improve documentation where we had found details difficult to understand
- Document our findings, results and failures for others to learn from

# What about applications?

- Constellation
  - Track amateur satellites
  - Using pseudo-ranging w/ multiple receiver stations
- Once ground stations start gathering and publishing data, the possibilities are endless
  - Live-track background radiation levels
  - Predict orbital paths of satellites
  - Detect collisions between objects in space
  - Determine orbital mechanics of objects in space
  - Identify potential threats to Earth

# What about applications?

- Constellation
  - Track amateur satellites
  - Using pseudo-ranging w/ multiple receiver stations
- Once ground stations start gathering and publishing data, the possibilities are endless
  - Live-track background radiation levels
  - Spot minute changes in the environment over time
  - Accurate, geo-referenced time
  - Basis for assisted GPS solutions
  - and many, many more

## 1 What is hgg

- hgg in a nutshell
- Who's behind it?

## 2 What we're actually doing

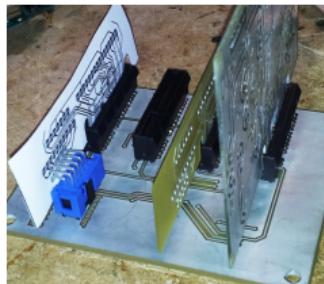

- The core idea
- Status quo
- How to help

# Specification of physical interface between modules

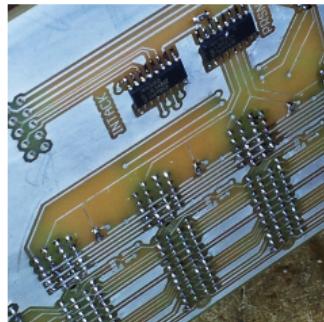

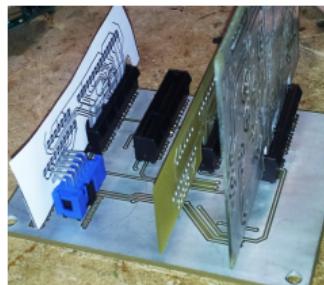

- Modules are connected via a backplane
- PCIe 4x plug w/ custom pinout
- 2x RS485 lanes for inter-module communication
- SPI-ish time broadcast bus
- Differential clock signal for high-res timing signal
- Each module sports storage for calibration data

# friendship0 backplane

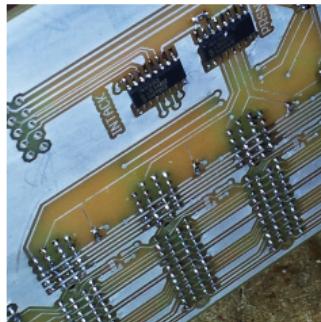

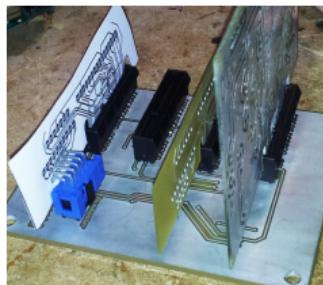

- Four modules slots, one dedicated to bus master module
- ICs for interrupt handling
- Can be easily scaled up, next step eight or nine slots

# friendship0 backplane

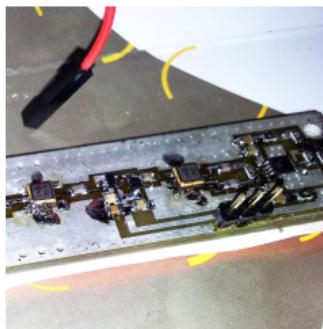

- Four modules slots, one dedicated to bus master module
- ICs for interrupt handling
- Can be easily scaled up, next step eight or nine slots

# friendship0 backplane

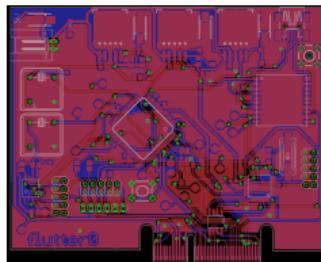

- Four modules slots, one dedicated to bus master module
- ICs for interrupt handling
- Can be easily scaled up, next step eight or nine slots

# dash0 proof of concept

- ADS-B receiver based around miniADSB module
- Easily track commercial aircrafts
- Perfect for verifying pseudo ranging algorithms

# flutter0 high precision distributed time source module

- Spartan3 FPGA for high-res timing (<100 ns)
- ATmega 168 for lo-res timing (1 s to 1/10th s)
- Low cost GPS module w/ external antenna support

- How to help

# Join us

- We meet almost every Saturday at shackspace, the stuttgart hackerspace

# Keep in touch

- Wiki

- Edit away at <http://hgg.aero/>
- There's a list of open tasks. Pick one or add one!

- GitHub

Check out our GitHub organization to see what projects we're working on and contribute code, documentation, or ideas.

- Public mailing list

Join the mailing list to receive updates about the project and discuss ideas with other members of the community.

- twitter

Follow us on Twitter for news and updates.
